

# Short Answer Questions

## SAQ 1

The process graph will look like this:

## SAQ 2

The pairs concurrent are:

- A && C
- A && D
- B && C
- B && D
- C && D

## SAQ 3

Yes, the init process can always terminate any process in the system. Init process is the parent of all the processes. It can reap a child process when the parent process exits before reaping its child. Init process can not be killed but any other processes can be killed within the init.
